RESEARCH EXPERIENCE

- **Purdue University** West Lafayette, IN
Graduate Assistantship *Aug. 2019 - Current*
 - **Efficient and Scalable Subgraph-based Graph Representation Learning (SGRL)**
Research Project (supported by GCoM@CS, Purdue & JPMorgan Chase), under the supervision of Prof. Pan Li. Design novel frameworks SUREL/SUREL+ for scalable subgraph-based GRL through algorithm and system co-design. A decoupled paradigm is proposed to learn the representation of walk- and set-based subgraphs, which breaks the computational bottleneck and enables efficient training and inference for large-scale link, relation, and higher-order prediction tasks. SUREL/SUREL+ ranks in the Top 5 on Open Graph Benchmark datasets.
- **LIX, École Polytechnique & Inria** Palaiseau, France
Research Intern *Jun. 2018 - Sept. 2018*
 - **Machine Learning Attacks to Location Privacy**
Research Project (supported by team Comète, EP), under the supervision of Prof. Catuscia Palamidessi. Developed a model of adversary that uses machine learning algorithms to capture users' movement patterns from perturbed trajectory data, which are gathered from location-based services and protected by a privacy mechanism, and then performs inference attacks to measure the vulnerability of the mechanism.

- **Traffic Prediction with Deep Spatial Temporal Graph Neural Networks**

Research Project (supported by Deep Learning Lab, PKU), under the supervision of Prof. Zhanxing Zhu.

Design a deep learning framework STGCN to predict traffic time series, which coherently models the topology of road networks and captures periodic traffic patterns through spatiotemporal convolutional blocks. It has been widely used as a SOTA graph machine-learning model for transportation research (over 3,300 citations).
